PRICELIST DC²Sensor

To give a total overview of your DC power consumption, Racktivity has complemented its product line with a new family of power meter and monitoring devices.

The DC²Sensor addresses the needs of telecommunications, broadband, wireless and broadcast service providers. The sensor can be installed at the DC power distribution board or in distributed remote locations such as PoPs, base stations, and head ends. The unit features a DIN rail mountable design and Ethernet connectivity and features 12 inputs for current measurements.

The DC²Sensor provides you with the missing element for a complete power monitoring solution and solves any issues with large or distributed estates of DC powered equipment.
